Overview

- Status of MDSplus
- Various plotting options
- What's new in Web Tools
- EFITviewer
- XPC for Postscript output and scrolling
- SigAlert to watch for bad/missing signals
- Databases at PPPL
- What other training or tools are needed?

Status of MDSplus

- MDSplus has had an extensive workout for DCPS testing
- We plan to minimize changes before CD-4 to reduce risk of delays
- Network trunks have increased from 1 Gb/s to 10 Gb/s
- Disks and CPUs will be beefed up before Physics Ops
 - CMOD is acquiring 15 GB/shot with straightforward architecture
- UDP events will be used (after CD-4) with a relay to TCP/IP when needed

Plotting Options

- Scope family
 - DWScope (solid; many examples available to start from)
 - jScope (uses java; color, overlays, contours, animations)
- Web Tools
 - Now can run from file input
 - Actively maintained, e.g., Open Science options coming
- ReviewPlus from GA
 - Bugs will be fixed
 - Difficult to add features
- Custom written programs
 - IDL (most widely used here)
 - Matlab (a more modern choice)
 - Python (free and being used more and more in fusion community)

Documentation and Web Tools found at <http://nstx.pppl.gov/nstx/Software>

New!

What's New as of 23-Jan-2015

[NSTX Status](#) [NSTX Run Schedule](#)

[FAQ](#) The answers to a lot of Frequently Asked Questions are available. If you can't find what you need there, ask a programmer (list below).

[MDSplus](#) is a set of software tools for data acquisition and storage. NSTX data is organized according to the MDSplus paradigm, so users need to be familiar with it.

General Purpose Computers : Access to the NSTX MDSplus data is available at PPPL from the UNIX cluster, personal computers, or the [Web](#). All access to the NSTX CAMAC highways must be done from skylark. [IDL](#) is now available on all PPPL computers.

[Web Tools](#) provide the ability to plot data from the web, search for MDSplus signal names and locate shot lists by date and by experimental proposal.

Documentation

[Logbook](#) The NSTX Electronic Logbook is available on the web or from [IDL on UNIX](#) (as syb_entry).

[IDL](#) is a popular programming language for analyzing NSTX data. The [PPPL IDL pages](#) include an introduction to IDL and examples for [MDSplus data access for NSTX](#).

This part of the NSTX web site is maintained by the NSTX Software Support Staff (see below) for use by NSTX Scientists and Engineers. You will find links for analyzing NSTX data from the web, as well as documentation on software you may use from other computers. Click on the FAQ tab above for answers to the most frequently asked questions on data access and computer use, or browse through this site from the other links here, or try using the [site map](#).

Need help? Ask the NSTX software support staff

Control Room Support, IDL, database, analysis [Bill Davis](#)
VMS Operating System [Tom Carroll](#), [VMS Admin](#)
Control Room Support, PCs, LabView [Gretchen Zimmer](#)
Unix [Unix Sys Admins](#)
MDSplus [NSTX ITD Support Staff](#)

LOOKING AT MDSplus DATA

[PLOTTING OPTIONS](#)

[SEARCHING/COMPARING/LISTING](#)

[Launch EPICweb](#)

[NSTX Control Room Monitoring](#)

What's New in WebTools

The screenshot shows the NSTX software web interface. At the top, there are navigation tabs: Overview, Programming, Diagnostics, Applications, FAQ, Web Tools, UNIX & VMS, and MDSplus. Below the tabs, the word "software" is displayed. The main content area features several plots: a line graph labeled "I_p (Measured)" with a y-axis from 0 to 1.2x10⁶ and an x-axis from 0 to 0.4; a 2D heatmap plot; a central plot labeled "Beta toroidal (%)" showing a cross-section of a torus with a color scale from 0 to 4; and another line graph at the bottom with a y-axis from -4 to 30 and an x-axis from -0.1 to 0.4. The text "Plots: 108989" is visible in the top left of the plot area. The NSTX logo is also present. Below the plots, the text "PLOTTING NSTX DATA" is displayed on a blue background.

[mdsPlotList](#), Web Tool for Plotting Signals OR Listing MDSplus Data for NSTX (**BEST**) ([20-signal version](#)). There is now a [version that reads your inputs from a file!](#) You can also [plot from different servers](#).

[mdsMultiSig](#), ([example](#)) for Plotting Multiple MDSplus Signals **on the same Frame**. Timebases are automatically converted **WOW** for math on signals ([20-signal version](#)).

NEW! You can read most of the input fields for web plotting from a file in [mdsplotfileinput.php](#).

[mdsSignals_clean](#), NSTX MDSplus Signal Plotting (doesn't remember previous settings)

[mdsPlot1](#), NSTX MDSplus Plotting Tool (for various "canned" plots)

[mdsScopeAdj](#), NSTX MDSplus **Adjustable** Scope Plotting Tool (plots in a new window) (**BEST for scopes**)

[mdsScope_clean](#), NSTX MDSplus Scope Plotting Tool (doesn't remember previous settings)

[mdsCrossPlot](#), Plot One MDSplus Signal vs. Another. Optionally display X-axis as HH:MM.

[Flux Cross-sections](#) NSTX **EFIT/LRDfit** Flux and Thomson Data Plotting

[MPTsplots](#) (or [mptsColorCont](#) ([example](#))) NSTX Multi-point Thomson Data Plotting

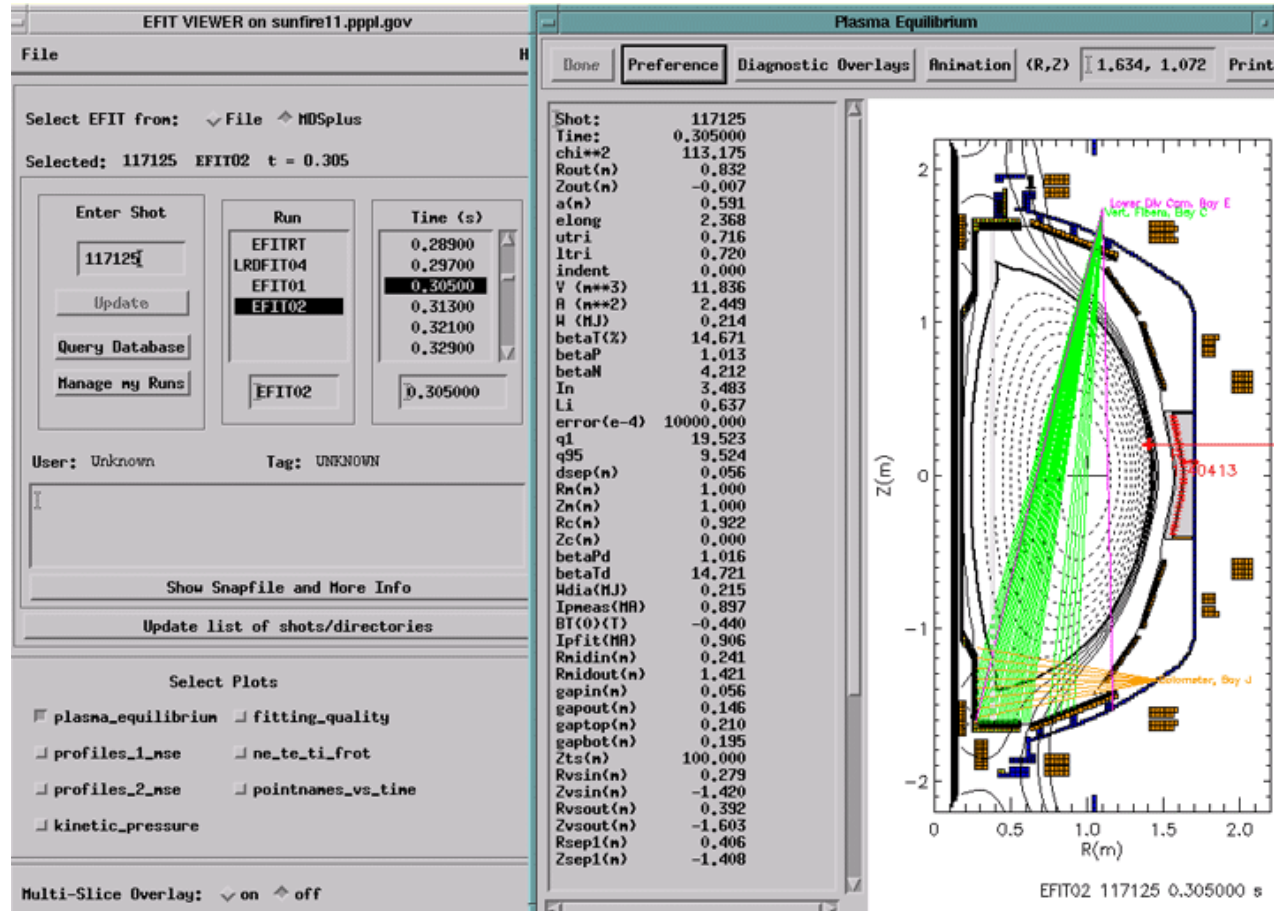

[NSTX Fast Camera Movies](#) 1 or 2 cameras with optional [overlays of MDSplus signals](#).

[NSTX RGA Trend Data](#) ([example](#))

- Web Plotting Tool can read settings from a file
- IDL code can be called within a web plotting tool (like in ReviewPlus)
- Plot directly from search results output, e.g., <http://nstx.pppl.gov/nstx/Software/WebTools/treesearch.html>
- Fast Camera and Blob Tracking pages enhanced

EFITviewer Enhancements

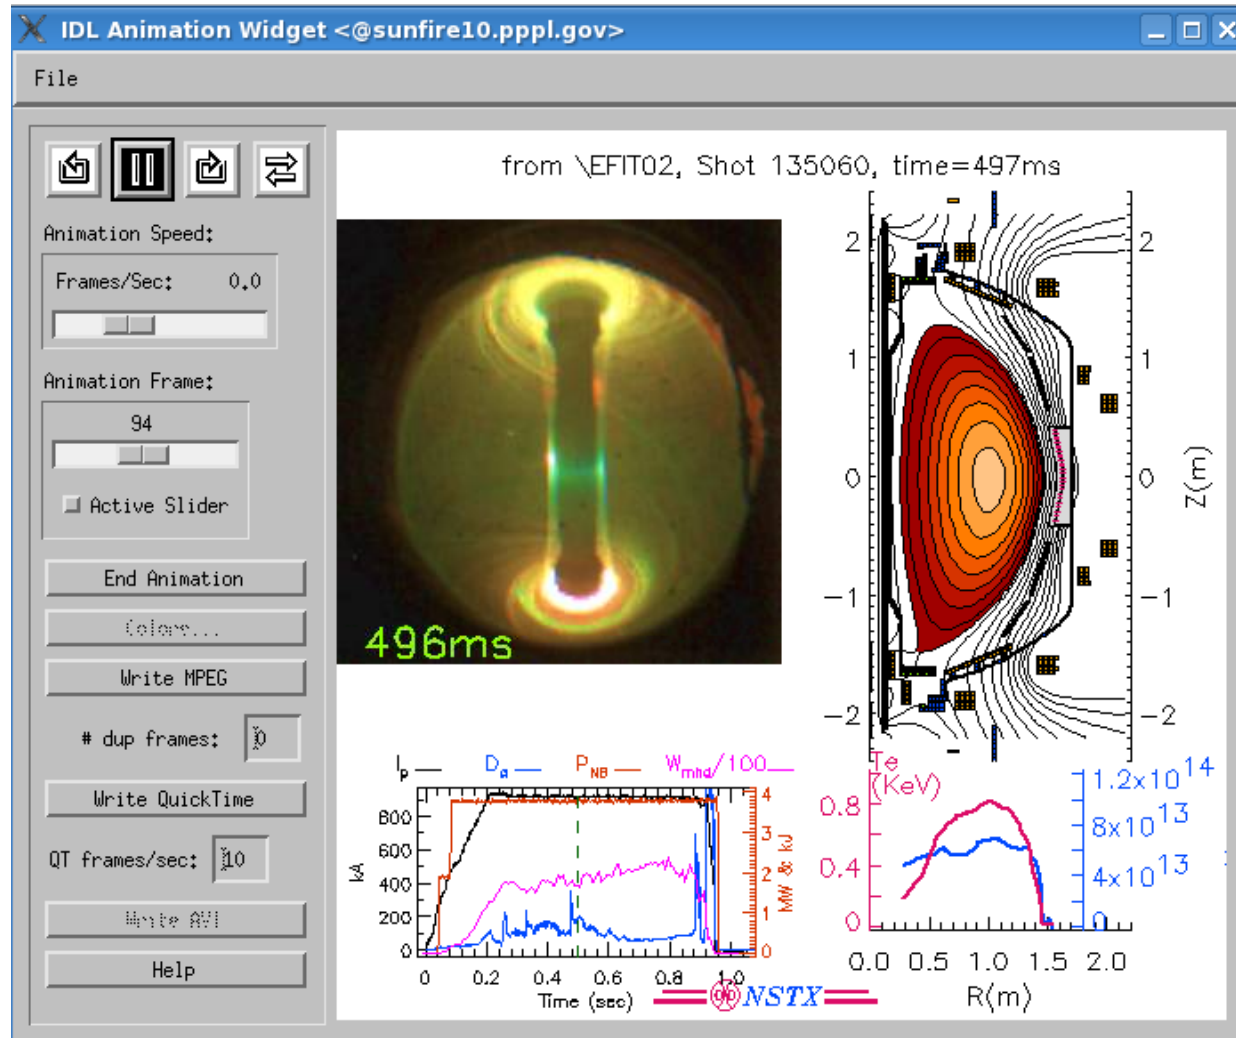

- Vessel geometry drawn based on shot number
- Devon Battaglia helping with diagnostic sight lines
- DCPS and various test versions of EFIT trees supported

Always looking for ways to show diverse data synchronously

Created in IDL in X-windows on the PPPL Linux cluster by:

IDL> efitmovies, "miro*135060", /thomson, /summary

X-window Postscript Plot Control

XPC allows you to "scroll back" to earlier plots created from IDL, as well as print or save them, without having to resend all the plot commands.

The screenshot shows the XPC List Box on the left and the IDL graphics window on the right. The XPC List Box contains a list of plots: XPC_002.ps (selected) and XPC_001.ps. It has buttons for 'Save to File', 'Delete Selected', 'Delete All', 'Done', and 'Help'. The IDL graphics window, titled 'gv: Graphics produced by IDL', shows a plot titled 'Plot 2'. The plot has a y-axis from 0 to 1.4×10^4 and an x-axis from 0 to 120. The plot shows a curve that starts at (0,0) and increases quadratically. The IDL command window at the bottom left shows the following commands:

```
IDL>  
IDL> setup_xpc  
IDL> plot, indgen(111),title='Plot 1'  
IDL> unsetup_xpc  
IDL>  
IDL> setup_xpc  
IDL> plot, indgen(111)^2,title='Plot 2'  
IDL> unsetup_xpc  
IDL>
```

SigAlert identifies signal problems

An automatic task reads specified signals after a shot , and sends email if:

1. The signal does not exist for the current shot.
2. (Optional) No part of the signal reaches a minimum required value.
3. (Optional) Any part of the signal exceeds a maximum allowed value.

Sample input file:

Signal	email	checkEvent	nsmooth	max	min	idlCall	setEvent	epicsAlarm
\wf::pnb	bdavis	NSTX_SOP	5	800	-10	none	none	none
\wf::prf	bdavis	NSTX_SOP	3	1e38	-1e38	none	none	none

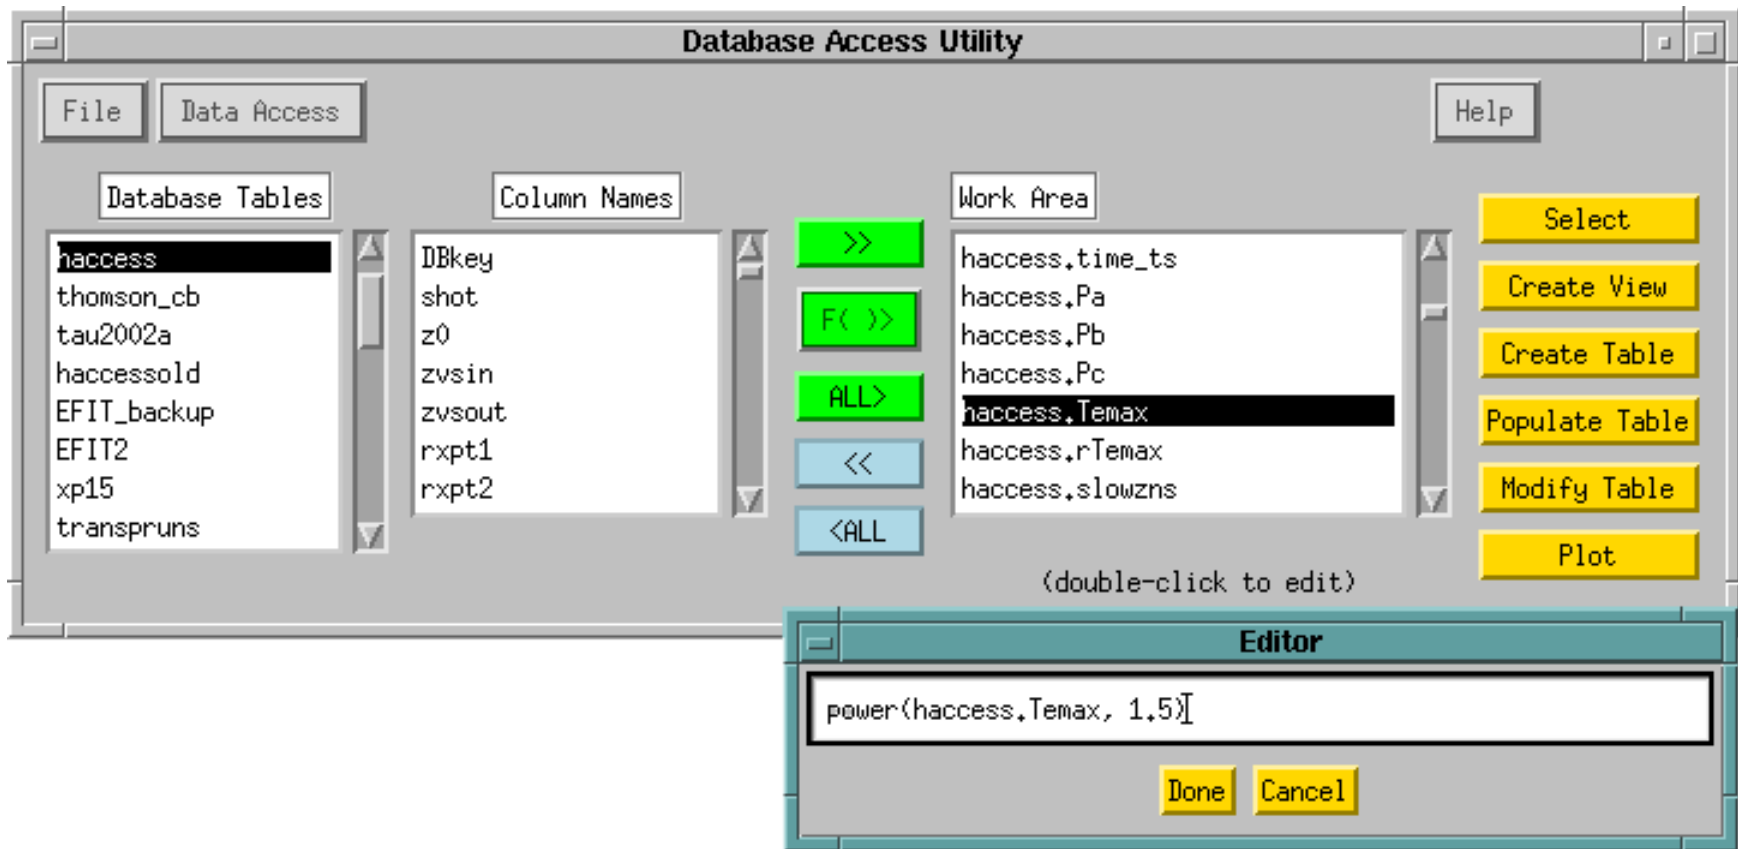

- If you want an IDL routine to be executed before checking the min or max, you can specify it in the "idlCall" column with the "data" variable operated on, e.g.,

```
data=smooth2d(data, /edge_truncate)
```

- If you want an MDSplus event declared when an alarm is raised by sigalert.pro, specify that in the "setEvent" column.
- See <http://nstx.pppl.gov/nstx/Software/Applications/SigAlert.html> for details

Database Tools are supported

IDL> dbaccess

Manual available at:

<http://nstx.pppl.gov/nstx/Software/Documents/dbaccess.html>

“Public” tables available in the NSTXLOGS Database

- “Survey” table contains a few dozen parameters at 3 times of interest (FlatTop, MaxIp, RampUp) for each shot
- EFITnn tables contain most of the EFIT parameters at 6 times of interest for each shot
- Neutron production
- XP-specific tables
- “Haccess” table contains parameters related to H-mode
- Blob database contains blob characteristics for NSTX and CMOD shots
- (Better organization and documentation of existing public tables are needed)

Summary

- MDSplus and computer support is a bit challenged at the moment, but no significant risk seen
- Web Tools continue to increase in utility
- We should expand our expertise in Matlab and Python in future years
- Public Databases for NSTX-U make results accessible and archivable; tools are available and can be supported
- We need to know about increased data loads, especially for camera data
- Let us know what training and tools will help your research

EFITviewer - zoom in to see MPTS locations, strike points, e.g.

Ctrl-clicking on the plot will print out the R and Z coordinates

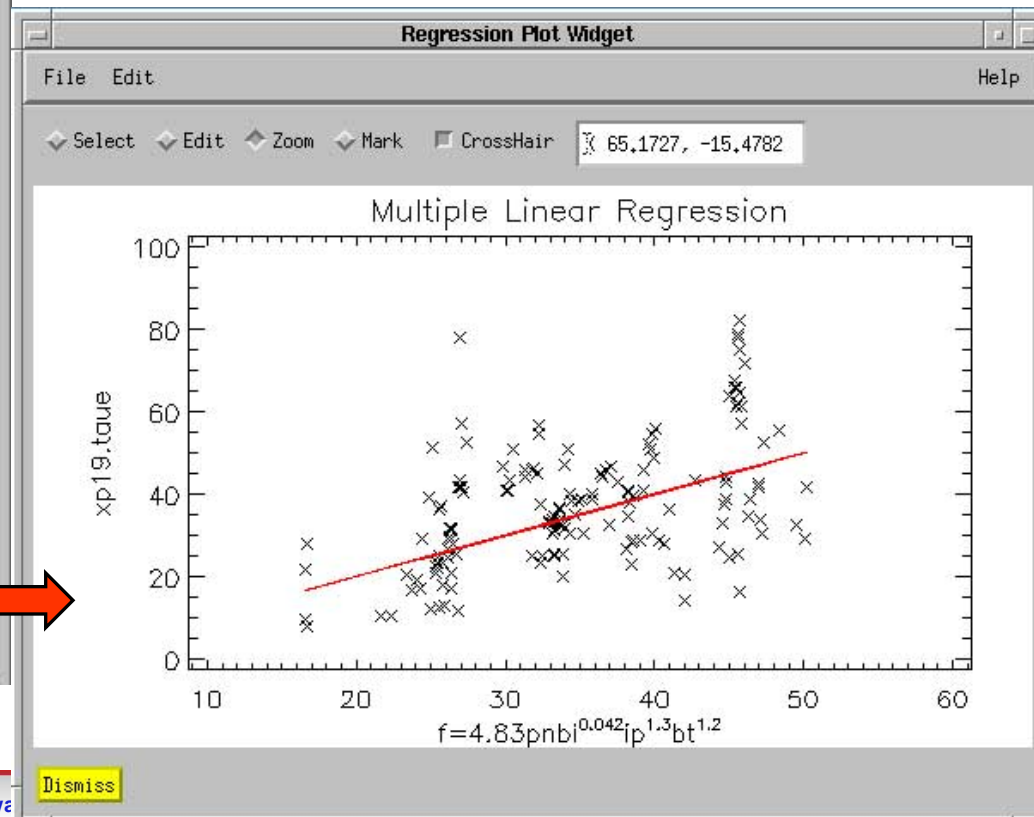

from \EFIT02, Shot 137702, time=196ms

Statistical Interface in DbAccess

- Multiple Linear Regression
- Powers Optional
- Weighting Optional
- Distribution Plotting

The DbAccess Model window displays a list of variables on the left: xp19.DBkey, xp19.shot, xp19.time, xp19.phase, xp19.source, xp19.pnbi, xp19.poh, xp19.ip, xp19.bt, and xp19.q95. The variables xp19.ip and xp19.bt are highlighted. On the right, the dependent variable is set to xp19.taue. Below this, there are buttons for '> Y >', '> Weight >', and '<-Plot Distribution'. The 'Effects in Model' section contains xp19.pnbi, xp19.ip, and xp19.bt, with buttons for '> Add >' and '< Remove <'. A 'Use Powers' checkbox is checked. A text field for 'Comment for Hardcopy:' contains 'XP 19 Scaling Analysis'. At the bottom, there are buttons for 'Dismiss', 'Run Model', and 'Inst. of (Y-Model)'. An orange arrow points from the 'Run Model' button towards the regression plot widget.

Search EFIT Database Table

<http://nstx.pppl.gov/nstx/Software/WebTools/searchefitdb.html>

Search the **EFIT1** table in the NSTX Logbook database (NSTXLOGS).

Not all EFITs are available for all shots. See [fitsAvailable.html](#)

Optionally limit to entries in which:

betan >=	*	AND	betan <		(Normalized Beta)
betat >=		AND	betat <		(Toroidal Beta)
BT0 >=		AND	BT0 <		(Toroidal Field at Mag. Axis, 0-1)
chisq >=		AND	chisq <		(Magnetic Chi^2)
gapbot >=		AND	gapbot <		(bottom gap - m)
gapin >=		AND	gapin <		(inboard gap - m)
gapout >=		AND	gapout <		(outboard gap - m)
gaptop >=		AND	gaptop <		(top gap - m)
Ip >=	500000	AND	Ip <		(Plasma Current, amps)
kappa >=		AND	kappa <		(Elongation, 1-3)
Li >=		AND	Li <		(Internal Inductance)
nebar_ts >=		AND	nebar_ts <		(Electron Density - n/cm^3)
Pa >=		AND	Pa <		(NB Source A, watts)
Pb >=		AND	Pb <		(NB Source B, watts)
Pc >=		AND	Pc <		(NB Source C, watts)
Pnbi >=		AND	Pnbi <		(Injected NB Power, watts)
Prad >=		AND	Prad <		(Radiated Power - w/cm^3)
Prf >=		AND	Prf <		(RF Power - watts)
taumhd >=	*	AND	taumhd <		(Energy confinement time - s)
Temax >=	*	AND	Temax <		(Peak Electron Temp, eV)
tribot >=		AND	tribot <		(bottom triangularity, 0-1)
tritop >=		AND	tritop <		(top triangularity, 0-1)
wmhd >=		AND	wmhd <		(wtot; Total Plasma Energy - J)

(a * will return that field, but not limit the query;
if both fields are blank, that parameter won't be returned)

Time of Interest=

Configuration=

Limit the Search to Shots from to (Optional)

Select shot, BETAN, IP, TAUMHD, TEMAX, TOI, TIME from EFIT

where shot >= 136000 AND shot <= 137000
AND IP >= 500000 AND TOI = 'maxip' order by shot

shot	BETAN	IP	TAUMHD	TEMAX	TIME
136000	5.14471	751026	-1.71009	177.696	0.553

Search for shots with certain criteria

<http://nstx.pppl.gov/nstx/Software/WebTools/mdsshots.html>

software

Overview Programming Diagnostics Applications
FAQ Web Tools UNIX & VMS MDSplus

Search for Shots in the NSTX MDSplus trees

(To use this page from outside the pppl.gov domain, you must be [authenticated at the firewall](#))

This page will list shots from the NSTX MDSplus Trees which meet certain criteria. You may select common parameters from the menus below, or specify your own signals. (This method is MUCH slower than using a database, such as [Searching the EFIT database.](#))

Search Shot(s)

For tips on convenient shot entry methods, see [ShotEntryHelp.html](#).
To find the shots for a certain date, [Query the NSTX Logbook](#)

(You may wish to copy and paste shots from the [NSTX XP Lists](#))

The min and max of the last signal you specify will be displayed with the shot list.

Where the **Maximum value for Signal:**

Beta Toroidal (%) is > 2
Plasma Current (KA) is > 700
(Selection Menu) is >
 is >
 is >
 is >

(Typed signal names must include the tree, e.g., \wf:ip
-- See the [NSTX Signals and Labels page](#) or the [MDSplus Tree Search Tool](#)).

For the Signals specified above, use a **Median-Smoothing** Neighborhood of points

Format to use for data list : (blank is default)

Shots with a Max of \EFIT01::betat GT 2
and Shots with a Max of \wf:ip GT 700

SHOT	MIN	MAX	Units
136000	-7.3507	800.045	kA
136001	-30.38	817.384	kA
136002	-27.772	853.651	kA
136003	-28.058	839.946	kA
136004	-32.09	819.479	kA
136005	-31.119	826.311	kA
136006	-31.303	808.516	kA
136007	-32.047	813.431	kA
136008	-27.533	825.746	kA
136009	-29.964	811.417	kA
136010	-32.703	810.815	kA
136011	-30.77	817.195	kA
136012	-32.254	807.92	kA
136013	-27.453	809.922	kA
136014	-26.624	806.96	kA
136015	-28.935	825.323	kA
136016	-31.572	846.212	kA
136017	-28.491	816.568	kA
136018	-30.761	805.05	kA
136019	-24.551	844.514	kA
136020	-28.067	813.223	kA

Search the NSTX Logbook

<http://nstx.pppl.gov/nstx/Software/WebTools/weblogplus.html>

Search/view the NSTX Logbook with Plot Summaries

This page will search the ENTRIES table in the NSTX Logbook database (NSTXLOGS).

(for output in table form, see [searchlogbookcomments.html](#); For a simpler version of this page, see [logbook.html](#).)

Optionally limit to entries where the **comments** contain the strings (blanks are OK):

AND AND

(NOT case sensitive)

Optionally limit to:

username= (e.g., KAYE; blank returns all users)

Include all entries with TOPIC='PHS OPS', 'SESSION LEADER', or 'RF'.

xp= (e.g., 5; blank returns all)

topics to display: **ALL:** (if checked, ignores boxes below)

BOLOMETRY: **BOUNDARY PHYSICS:** **CHI:**

CONDITIONING: **EFIT:** **ENGINEERING:** **FIDA:**

HYBRID: **IMPURITIES:** **MAGNETICS:** **MHD:**

MPTS: **MSE:** **PHYS OPS:** **RF:** **SESSION LEADER:**

Limit the Search to **Shots** from to (Optional) Also see [ShotEntryHelp.html](#)

Limit the Search to **Rundate** (yyyymmdd) (Optional) e.g., 20080229; **0=today**

(defaults to all of the most recent day with an entry)

Suppress plot thumbnails

(Output will appear in a separate window entitled "Search Results from the NSTX Logbook")

Output from Searching the NSTX Logbook

139491 XP# 1045 SESSION LEADER Aug 03 2010 01:59PM ekolemen

Problem with the reproduction of the x-point shot from friday.

Try to reload 137983.

OK but the beams were not the same. Ends at 450 ms.

139491 XP# 1045 SESSION LEADER Aug 03 2010 02:00PM VLAD

Try loadin 137983, another SP-controlled shot.

Result: better, but still short.

139492 XP# 1045 SESSION LEADER Aug 03 2010 02:00PM ekolemen

Reload the same beams. Good match. We can start the XP.

139492 XP# 1045 SESSION LEADER Aug 03 2010 02:01PM VLAD

Repeat previous shot, with NBI from 137983.

Better.

139492 XP# 1058 BOLOMETRY Aug 03 2010 02:15PM spaul

Very high Prad with peaked profile, collapsing at .65 sec Prad on wings rises

forming a hollow profile with edge power density exceeding .2 MW/m³. Total Prad about 1.5 MW and Te decreases after .6 sec.

139493 XP# 1045 SESSION LEADER Aug 03 2010 02:04PM ekolemen

Move the strik point inwards by 3 cm from 250 to 350 ms to 47 cm.
