In the publication of “Reduced model prediction of electron temperature profiles in microtearing-dominated National Spherical Torus eXperiment plasmas” by Kaye *et al.*,¹ some of the values of the RMS deviation and offset in Table I were incorrect. Given here is Table I with the corrected values. There is no impact of the corrected values on either the general results or the related discussion.

TABLE I. T_e profile fit metrics for the six times of interest.

Time of interest (s)	RMS deviation (%)	Offset (%)
0.2	18	13
0.3	14	6
0.4	10	1
0.5	4	−3
0.6	6	−3
0.7	7	−5
