

Non-Maxwellian Effects

F.Allais, J-P Matte, F. Alouani, INRS ; D. Stotler, PPPL.

- Steep T_e gradients in divertors, along B lines → surplus hot electrons in cold plasma.
- Nonlocal corrections are being developed.
- To observe: Need lines with $\Delta E > 3-5 kT_{\text{cold}}$.
(e.g. inject impurities, look for $K\alpha$ line)
